1. Executive Summary1. Executive Summary1. Executive Summary

The proposed Event Attendance Management System is a centralized digital platform designed to simplify, standardize, and automate attendance monitoring for events conducted by participating organizations.

The system will use QR code technology to provide a fast and reliable method of recording attendee attendance for individual event sessions. It will maintain a reusable attendee database while requiring attendees to be registered to each event in which they participate.

Each event registration receives its own unique, random, non-guessable QR code. The QR code is specific to that event registration and is not reused for another event.

The system will support multiple organizations, multiple administrators, attendance checkers, multi-day events, multiple sessions, online and offline attendance checking, attendance reports, dashboards, territory-based analytics, bulk QR-code PDF generation, and automated attendee identification card generation.The proposed Event Attendance Management System is a centralized digital platform designed to simplify, standardize, and automate attendance monitoring for events conducted by participating organizations.

10. Attendance Validation10. Attendance Validation10. Attendance Validation

Attendance checking will normally be available beginning 30 minutes before the session start time.

Example:

Session Start: 8:00 AM

Attendance Opens: 7:30 AM

If an attendee attempts to check in too early, attendance will not be recorded.

A duplicate scan for the same event registration and session returns "Already Checked In." There is no requirement to mark attendees as late.

Check-in is required. Check-out is optional and configured at the event level. Attendance checking will normally be available beginning 30 minutes before the session start time.

Example:

Session Start: 8:00 AM

Attendance Opens: 7:30 AM

If an attendee attempts to check in too early, attendance will not be recorded.

A duplicate scan for the same event registration and session returns "Already Checked In." There is no requirement to mark attendees as late.

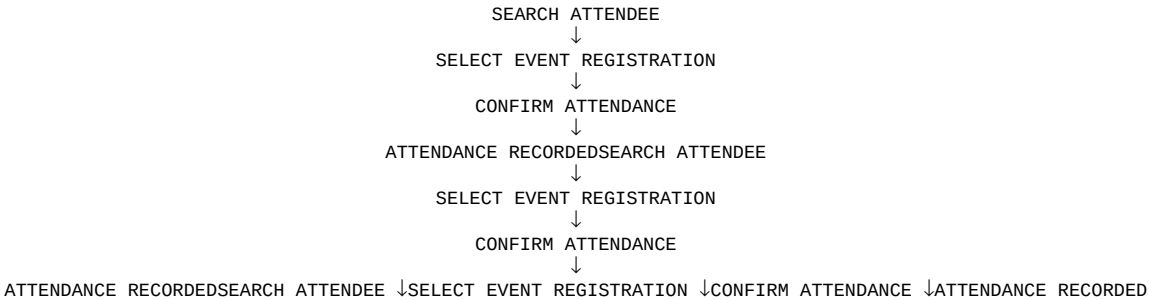

Check-in is required. Check-out is optional and configured at the event level. Attendance checking will normally be available beginning 30 minutes before the session start time. 27. Proposed Attendance Workflow27. Proposed Attendance Workflow27. Proposed Attendance Workflow

28. Project Scope Summary28. Project Scope Summary28. Project Scope Summary

Module	Description
Organization Management	Manage multiple organizations
User Management	Manage Super Admins, Organization Admins, and Attendance Checkers
Attendee Management	Maintain reusable attendee master records
Territory Management	Manage Union and Mission hierarchy
Event Registration	Register attendees to specific events
QR Management	Generate unique event-specific QR tokens and bulk QR-code PDFs
Event Management	Create and manage events
Session Management	Create event sessions
Attendance	QR and manual attendance checking
Offline Attendance	Store and synchronize attendance without internet
Identification Cards	Generate standard ID cards with customizable backgrounds; individual or bulk PDF export
Reports	Generate attendance reports
Dashboard	Visualize attendance metrics
Export	Excel, CSV, QR PDF, and ID-card PDF exports
Audit Logs	Track important system activities

29. Conclusion29. Conclusion29. Conclusion

The Event Attendance Management System provides a scalable and centralized solution for managing attendee registration, event attendance, identification, and reporting across multiple organizations and events.

Its primary approach combines a reusable attendee database, mandatory event registration, one-time event-specific QR credentials, session-based attendance, offline-capable scanning, automated reporting, bulk QR generation, and automated attendee identification cards.

The proposed system will provide organizations with a more efficient, accurate, transparent, and scalable approach to event attendance management while creating a foundation for future digital services and integrations.
